(54) LIQUID CRYSTAL DISPLAY DEVICE

(57)Abstract:

PURPOSE: To prevent the deterioration in the characteristic of a visual angle and to improve the utilization efficiency of light in a liquid crystal display device including a light scattering liquid crystal layer.

CONSTITUTION: This device is constituted of a 1st transparent substrate 10 provided with a transference electrode, a 2nd transparent substrate 12 arranged to be opposed to the 1st substrate 10 through a small gap and provided with a transference electrode, the light scattering liquid crystal layer 14 inserted between the 1st and the 2nd substrates 10 and 12, a polarizer 24 arranged on the outside of the 1st substrate 10, a analyzer 26 arranged on the outside of the 2nd substrate 12, and a backlight 28 supplying light having directivity in a direction nearly perpendicular to the 1st and the 2nd substrates 10 and 12 to the analyzer 24.
